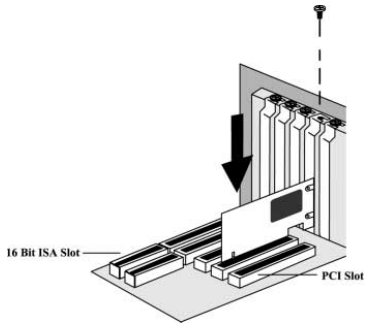
Installing the Hardware:

1. Turn off and unplug the computer and all peripherals. Open the computer case and discharge any static electricity by grounding yourself (touch the power supply, etc. or wear a grounding strap).

2. Carefully insert and secure the modem into an open PCI slot and close the computer.



3. Connect the modem Line input to an analog phone jack using an RJ-11 phone cable. Optionally connect a telephone to the Phone input on the modem card. Reconnect the peripherals and start the computer.

Uninstall Procedure:

1. Insert the CD-ROM provided with the modem.

2. Open the CD-ROM from the desktop and double-click the “LT Remove.exe” application.

For more detailed information on installation, the Modem-On-Hold feature, Bitware, and Adobe Acrobat 4.0 consult the User Guide included with the modem.
